📺 WATCH TUTORIAL

ADR Identification Basics

Analyze patient case scenarios to identify potential Adverse Drug Reactions (ADRs). Review symptoms, medication history, and timelines to determine whether the reaction is drug-related and identify the suspected drug.

ID: task1

Approved

📺 WATCH TUTORIAL

ADR Reporting & Documentation

Complete a structured ADR reporting form based on a given case scenario. This task simulates real-world pharmacovigilance reporting systems used in healthcare and pharmaceutical industries.

ID: task2

Approved

📺 WATCH TUTORIAL

Causality Assessment

Evaluate the relationship between a drug and an adverse reaction using standard causality assessment methods. Analyze case studies and classify reactions as Certain, Probable, or Possible.

ID: task3

Approved

📺 WATCH TUTORIAL

Severity & Case Classification

Classify adverse drug reactions based on seriousness and expectedness. Evaluate multiple cases and determine their clinical impact using pharmacovigilance guidelines.

ID: task4

Approved

📺 WATCH TUTORIAL

Individual Case Safety Report (ICSR)

Perform a complete pharmacovigilance assessment on a detailed case study. This includes ADR identification, reporting, causality assessment, and severity classification, simulating the role of a Drug Safety Associate.

ID: task5
